Self-Critique Memo for project 2

Xi Rao

Unlike usual tough time, I do struggled for a while, but generally speaking, the whole process is pretty smooth. With an existing knowledge of JSON and XML, I didn't encounter much technical issue. It made benefits to the project, but on the other hand, I lost chance of learning new stuff.

I like the design part which I got confused. After reading the textbook, I leveraged some easy strategy to organize the information and discovered new views to think over an issue. It's much better than just read. However, during the reading, I realized that most strategies are fit for huge project. But our projects for this courses don't seem like that. Thus, we wouldn't have the luxury to practice those theories. I wish there's other way to enforce this part of knowledge.
